PROFESSIONAL SUMMARY

Automation Specialist with a 4-year background in application and cloud support, automating administrative work with Microsoft Power Automate and Copilot. Builds workflow automations in n8n and GoHighLevel that connect apps through webhooks, REST APIs and JSON, and uses the OpenAI API to capture, validate, score and route leads. Skilled at debugging failing workflows and documenting every building so teams can use and maintain it.

SKILLS

- **Automation Platforms:** n8n, Microsoft Power Automate, GoHighLevel (workflows, custom fields, tags), workflow automation, process automation, API integration
- **AI Tools:** OpenAI API, Microsoft Copilot, prompt design, structured JSON output, lead scoring
- **APIs and Integrations:** REST APIs, webhooks, JSON, HTTP requests, bearer token authentication, Google Sheets, Slack, Gmail, Outlook, Teams, SharePoint, Excel
- **Scripting:** JavaScript (n8n Code nodes), Office Scripts
- **Support and Operations:** application support, cloud support, troubleshooting, technical documentation, ticket updates
- **Currently Learning:** Zapier

WORK EXPERIENCE

Software Engineer | Application and Cloud Support Analyst

Accenture | Manila, Philippines | July 2022 - October 2026

- Automated weekly reports, approval requests, ticket updates, data entry and reminders using Microsoft Power Automate.
- Built flows connecting Outlook, Teams, SharePoint, Excel and Office Scripts to send notifications and route approvals without manual follow-up.
- Used Microsoft Copilot to draft documentation, reducing the time spent on the task.
- Fixed failing flow runs by reviewing run history and correcting connection, permission and data format errors.
- Documented each flow so teammates could use and maintain it.

PROJECTS

AI Lead Scoring for GoHighLevel (n8n and OpenAI) | Personal project

- Built an n8n workflow triggered by a GoHighLevel webhook when a new contact is created.
- Sent form answers to the OpenAI API to generate a short lead summary and a hot, warm or cold score.
- Wrote the summary and scored back to GoHighLevel custom fields through the API and added a matching tag.
- Authenticated with a Private Integration token, resolved field ID, request body and JSON parsing issues, and wrote a client setup guide.

Lead Intake and Triage Automation (n8n) | Personal project

- Built a webhook workflow that cleans and validates leads (email check, timestamp, keyword-based priority flag) with a JavaScript Code node.
- Enriched each lead with its country region through a public REST API, with retries and a fallback when the lookup fails.
- Logged every lead to Google Sheets and sent Slack alerts for urgent leads.
- Fixed an empty region value caused by a deprecated API endpoint and an incorrect response mapping and wrote a client guide with test cases and troubleshooting.

EDUCATION

Bachelor of Science in Mechatronics Engineering

Batangas State University | 2018 - 2022
